EDUCATION

Guru Gobind Singh Indraprastha University

Bachelor of Computer Applications - 7.8/10 CGPA

Delhi, India

Oct 2022 – June 2025

EXPERIENCE

Rocket.Chat

Open Source Contributor

Mar 2026 – Present

Remote

- Built rc-skill-tester, a gemini-cli skill generating Rocket.Chat Apps from plain-English prompts
- Implemented automated Jest test generation with mocked Apps Engine accessors (IRead, IModify, IPersistence)
- Added safety rules preventing silent runtime bugs like bot self-reply loops
- Submitted PRs across 3 Rocket.Chat repos covering UX, CLI, and i18n fixes

CuriousPixel Art Studio

Junior Game Designer Intern

Nov 2023 – Jan 2024

Delhi, India

- Implemented core RPG mechanics, character abilities, and enemy AI in Unity/C# across playable builds
- Built in-game menus and HUD systems using Figma and Unity UI, iterating through playtest cycles
- Authored a structured Game Design Document covering 15+ gameplay systems for team alignment

PROJECTS

On-Device SMS Scam Detector | Flutter, TFLite, PyTorch, Kotlin, Riverpod

GitHub | Link

- Built fully offline Android scam detector with zero network layer by architecture
- Fine-tuned multilingual DistilBERT achieving 90% scam recall on template-grouped held-out set
- Intercepted SMS in real time using Kotlin BroadcastReceiver bridged to Flutter MethodChannels
- Gated ML verdicts with regex rule signals to reduce false positives on safe messages
- Surfaced triggered regex signals on each verdict, explaining why a message was flagged

Offline-First Habit Tracker | React Native, Expo, TypeScript, SQLite, Supabase

GitHub | Link

- Built and tested offline-first habit tracker, currently in closed testing ahead of Play Store launch
- Engineered custom last-write-wins sync engine with six-rule conflict resolution across devices
- Wrote to local SQLite with optimistic UI updates; app fully functional with zero network
- Excluded device-local fields from sync at the TypeScript type boundary, preventing corruption

GitHub-Driven Strategy Game | Next.js 14, TypeScript, Supabase, Phaser.js

GitHub | Link

- Built full-stack platform mapping 8 real GitHub metrics to in-game resources and mechanics
- Enforced server-authoritative logic for raids and game actions, with RLS on every database table
- Cached GitHub API in Supabase with 30-min per-user cooldowns to respect the 5,000 req/hr limit
- Synced contribution data on login and via nightly Vercel cron, never calling GitHub from the client

On-Device NSFW Image & Video Blurrer | Chrome MV3, TypeScript, React 19, TensorFlow.js

GitHub | Link

- Built on-device NSFW image and video classifier with MobileNetV2, zero network calls
- Architected MV3 inference pipeline spanning content script, service worker, and offscreen document
- Classified images in 12ms median on-device using serialized GPU queue, viewport-priority ordering
- Implemented fail-closed blur-by-default, keeping all media blurred until verified safe on-device
- Detected explicit media at 80% recall with zero false positives on 17-image corpus

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Kotlin, Dart, Solidity, C/C++, SQL (PostgreSQL), HTML/CSS

Frameworks: React.js, Next.js, Node.js, React Native, Flutter, FastAPI, Flask

Databases & Platforms: PostgreSQL, Supabase, Firebase, Ethereum

Tools & Technologies: Git, GitHub Actions, Docker, OpenAI API, Whisper, Socket.io, Stripe API, Monaco Editor
